Raise the standards

ART IS EVERYWHERE "Everything you can imagine is real"

"Imagination is more important than knowledge" – Albert Einstein

In the vibrant world of creativity, our school organised a drawing competition that brought together the young artists from Grades I and II. The event was all about expressing creativity through art, and it was truly heart-warming to see the young artists put their imaginations on paper leaving everyone inspired and amazed.

The students expressed their love for Mother Nature through their art, made funny dancing vegetables and fruits, created a garden scenery, etc. Each student gave their best and it was heart-warming to see each student engrossed in creating a colourful image. The art of students proved that drawing is a powerful medium of expression.

Nouns Activity

Noun Pocket Chart Sorting Activity

Activities are great fun for teaching subject-related concepts to the students. To provide hands-on learning opportunities, the teachers of Grade- I conducted an interesting activity on "Nouns". Nouns play an important part in sentence formation and they allow young students to associate with people and things.

As a part of the activity, the students were given a few placards of different nouns. The students had to identify each noun as a person, place, animal, or thing and place them in the correct pocket on the chart. The students deeply involved themselves in the activity and focused on their concentration and identification skills.

Nouns are the foundation of language and are essential for communication. Therefore, this fun-filled activity enabled the students develop their communication skills and also appropriate usage of nouns in their daily lives.

MATH SUBJECT ACTIVITY (Ordinal Numbers)

“The only way to learn Mathematics is to do Mathematics.”

Learning activities play an important role in student learning and engagement. Students benefit from the opportunity to reflect upon their learning and ascertain progression towards outcomes. To engage the students with each other in learning tasks, the teachers of Grade-II conducted an “Ordinal Numbers” activity for the students. Ordinal numbers help explain an object or event's position in a sequence. To make the concept more interesting, the students participated in an activity where they had to sort a few concrete objects and name them according to their positions, like First, Second, Third, etc.

This activity enabled the students to develop number sense and fluency and also helped the students to develop their calculation skills with confidence by understanding how different sets of numbers work in the same way.

"FUN BLAST WITH SENSE ORGANS "

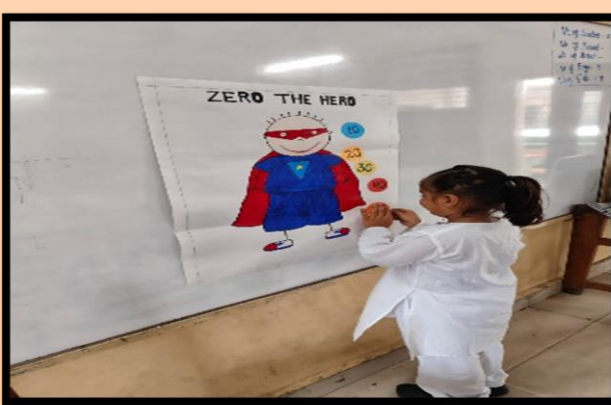

I see and I remember, I do and I understand. Sensory activities are a great way to enhance learning by introducing play, discovery, and creativity into the classroom.

Sensory activities are a fantastic way to help children explore and understand the world behind them. These activities also provide an opportunity to the students to communicate with their teachers and peers. The students of Grade II participated in a sensory playhouse, which not only helped them expand their vocabulary but also engaged them in fun and exciting ways. This activity was both enjoyable and educational fostering development through play.

ZERO THE HERO

Learning by doing is a pedagogical method based on the idea that you can learn something better and faster if you practice it – if you “do it” as the name suggests. To enable students to assimilate concepts through actions, the teachers of grade I engaged the students in an interactive Math Activity “Zero The Hero”. Learning the zero concept is important in mathematics as zero is used as a placeholder in place values. The story of Zero the Hero was narrated to the students by the teachers using colorful charts and then the students paired zero with different numbers to understand the place value of it. This activity enabled the students to acknowledge that though Zero means “Nothing”, it plays an important role when paired with other numbers.

INTERNATIONAL YOGA DAY

He who has health has hope and he who has hope has everything
“Yoga is the journey of the self, to self, through self, to know and listen to yourself,” You can not always control what goes on outside, but you can always control what goes inside, so one can make this journey possible through Yoga. In this regard, students of Gr I & II with great enthusiasm and excitement celebrated International Yoga Day on 21st June in their school premises, with a motive to promote awareness about the importance of yoga and its overall development. All the students demonstrated various asanas (yoga positions) in sync with different meditation chants along with their teachers. Teacher emphasized on the essence of yoga and encouraged to practice yoga regularly for their holistic development. Hence this event provided a platform to develop a positive attitude, and positive thinking and proved the activity interesting and enjoyable.
